

THE EXPANDED TECH-CHECK

These questions will help determine larger-scale technology issues that may include high-level programming and backend development needs. This is used initially as a checkpoint at a very basic level to identify client expectations.

1. Please identify whether you currently use any of the following features on your site. Describe in as much detail as possible. (Check all that apply and describe briefly below.)

- Search engine** — This may be need to enable visitors to search for previous performances/events
- Personalization (login/cookie set) — not needed
- Security features — not needed
- Survey/voting tools — not needed
- Email contact form** — allows visitors to subscribe to email updates
- Shopping cart** — allows visitors to make donations
- Discussion board/bulletin board
- News/press release area** — this will be updated frequently
- Other _____

2. List any other features that you hope to add to your site, now or in the future.

TBD.

3. Are there or will there be any e-commerce transactions on the site (secure transactions, interface with inventory database, and fulfillment)?

- Yes — this will need to be a method for visitors to donate online. Currently Historic Seattle is using Donate Now. More research will need to be done to find out if this method should be used on this website.
- No**

4. Is there or will there be login, registration, and/or personalization incorporated?

- Yes
- No**

5. Do you currently or will you in the future use a content management system (useful, for example, in the management of e-commerce inventory or text-publishing databases) to dynamically update and deploy content?

- Yes** — WordPress will be used to create and maintain this site.
- No

6. Does the site need to integrate with any preexisting database system? If so, what kind of database is currently being used (FileMaker, Access, Oracle, SQL)?

Eventually this site will need to have the ability to create/link to a email database. Again, this will need more research.

7. Will you be using any scripts or code that have already been established? Are they server-side or client-side (if known)?

- Yes
- No**

8. Please list names and contact information for the current tech lead and any third-party vendors/providers that we may need to talk with to gather additional details.

1. Eugenia W., Director of Preservation Services, Historic Seattle (www.historicseattle.org)
Phone: 206.###.####, ext. ###, Email: info@historicSeattle.org
2. Sara E., Communications, 4Culture (<http://www.4culture.org/>)
Phone: 206 ###.####, ext. ###
